

Which JDBC should be used?

17 May 2026 11:02

1. If we are using only one type of database in our application then it is recommended to use Type-4 Driver. Example: Stand-alone applications and small scale web applications.
2. If we are using multiple types of databases in our application then Type-3 driver is recommended to use. For example, larger scale web application.
3. If Type-3 and Type 4 drivers are not available then only we should go for type 2 driver.
4. If no other driver is available then we should go for type one driver.

Difference between thin & thick driver.

If Driver software don't require any component to communicate with database it is called thin driver.

If Driver software need extra component to communicate with the database is called thick driver

Comparison table of all JDBC drivers

Property	Type-1	Type-2	Type-3	Type-4
Implemented in	Only Java	Java + Native language	Only Java	Only Java
Conversion	From JDBC calls to ODBC calls.	From JDBC calls to native library calls.	From JDBC calls to middleware server specific calls.	From JDBC calls to databases specific calls. Write down property.
Architecture	2-Tier	2-Tier	3-Tier	2-Tier
Is it platform independent	No	No	Yes	Yes
Is it database independent	Yes	No	Yes	No
Is it thin or thick	Thick	Thick	Thick	Thin
Also known as	JDBC-ODBC bridge driver or	Native API-partly Java driver or	All Java net protocol Or network protocol driver Or	All Java native protocol driver Or pure Java driver or thin driver.

	bridge driver.	native driver	middleware.
