

JDBC(Java Database Connectivity)

19 April 2026 09:43

Dependency diagram.

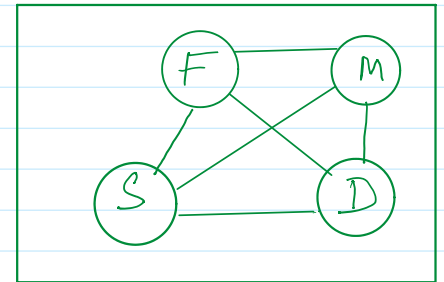

A higher-level unit that groups related packages and includes a module descriptor.

Module declare dependencies

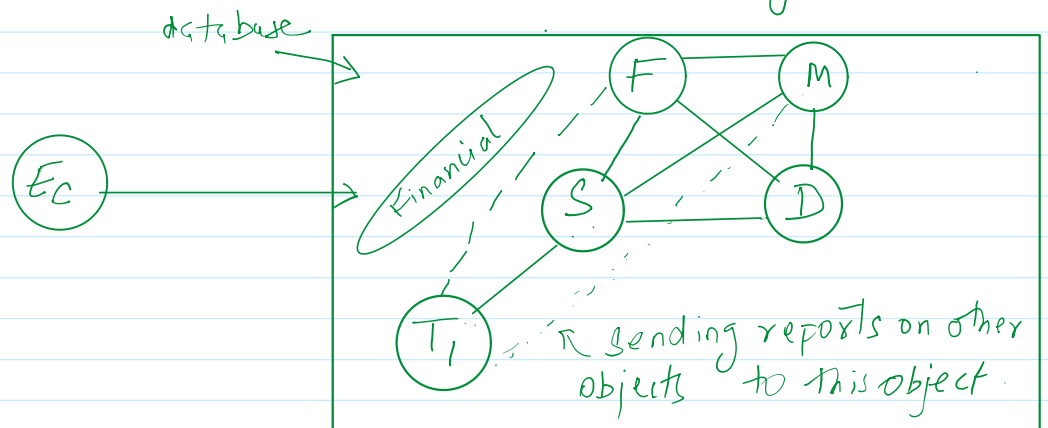

Meta-data

defines exports, requirement,

(module-info.java). It provides strong encapsulation and explicit dependency management.

family-module.

A Java class has a dependency on another class if it uses an instance of that class.

Dependency Injection: — How hackers use this loop hole, to bypass a password?

1. JDBC in simple way
2. Storage Areas.
3. Introduction to JDBC
4. JDBC Architecture.
5. JDBC API
6. Driver Interface, Driver class & Driver Software, Maven.
7. Types of Drivers.
8. Standard steps to develop JDBC Application.
9. Working with different types of drivers.
10. Program to create and drop table.
11. How to read dynamic input from keyboard
12. How to form SQL queries with dynamic input.
13. Program for CRUD operations.
14. Real time coding standards for JDBC Applications.
15. How to develop & run JDBC app. in different IDE's like eclipse, netbeans and VS Code.
16. Working with MySQL database
17. Life cycle of SQL query Executor.
18. Prepared Statement.
19. Difference between Statement and Prepared Statement.
20. SQL Injection Attack.
21. Stored Procedures.
22. Callable Statement
23. Cursors
24. Functions.
25. Comparison between Statement vs Prepared Statement vs. Callable Statement.
26. Batch updates.
27. executeQuery() vs executeUpdate vs execute() vs executeBatch().
28. Insert & Retrive Date values.

29. Insert & Retrive BLOB Type.

30. Insert & Retrive CLOB Type

31. Connection Pooling.

32. Working with Properties.

33. Different ways to get Connection object.

34. Transaction Management. 35. Savepoints.

36. Transaction Concurrency Problem & Isolation level.

37. MetaData

- DatabaseMetaData
- ResultSetMetaData.
- ParameterMeta Data.

38 JDBC with non-Traditional Database like Excel. (AI modules)

39. ResultSet Types.

- Forward only & Scrollable.
- Scroll sensitive & Scroll insensitive.
- Read only & updatable.

40. ResultSet holdability

41. Rowset vs ResultSet.

43. Working with all Rowsets.

44. Topic like RowId etc.
